Green ID programming platform

A comprehensive, evolving environment which helps the user to make better use of their electronic devices.

Green ID environment offers numerous innovative opportunities of developing user-device connections. We offer a number of apps useful both in private life and in career. The basic application - the GreenID app - enables the user to sign into all of their GreenID apps in one login. It may also be used for account managing of the GreenID service, adding new applications and exterior applications.

GreenFamily

GreenFamily is an application enabling the most accurate localizing of your added devices (and their users). The application, upon launching, tries to define the position via GPS or GPRS and pass it to the data cloud. Moreover, a configurable S.O.S. message (sms or e-mail) sending option to selected users is available in this application.

SmartPay

SmartPay app enables the user to access multiple accounts in different banks from a single, easy-to-use and user friendly app. SmartPay makes it possible to not only monitor the account balance, commission bank transfers and pay bills, but also to make contactless payments through a smartphone.

GreenAlerts

Application for drivers informing about the road threats and giving the opportunity of reporting new information or browsing previous reports. The reports confirmed by other drivers improve the statistics of the user. It has a sound alert personalization option for selected threat categories.

GreenAlerts

A telemedical application used for personal diagnosing in two versions – for patients and doctors. The main aim of the application if to gather medical data from the dedicated devices and collect them in the application and the cloud. The results history is passed along with sharing option for the doctor. The version for doctors has additional patient data management features.
